

Just like we have some rules that we follow to speak English(the grammar), we have some rules to follow while writing a Java program. The set of these rules is called **Syntax**.

## Comments

**Single-line comment:** Use `//` to add a single-line comment.

Example : `// This is single line comment`

**Multi-line comment:** Use `/* */` for comments spanning multiple lines.

## Variables

A variable is a container that holds data. This value can be changed during the execution of the program.

Before use, you need to declare and define it.

### 1. Variable Declaration:

```
int age;
```

```
String name; //int and string is data types
```

### 2. Variable Initialization:

```
age = 69;
```

```
name = "the boys";
```

### 3. Combined Declaration and Initialization:

```
int age = 69;
```

```
String name = "the boys";
```

#### 4. Final Variables (Constants):

```
final int a = 7;[DTL]
```

#### **Role of + operator between String & numbers**

- String + String = String - Concatenation
- String + int = String - Concatenation
- int + int = int - Arithmetic Addition
